

ROBOTS-4-U.com

Materials

- Card Stock or Thick Paper
- Scissors and/or Hobby Knife
- Glue and/or Tape

Directions

1. Print the robot! It's recommended to print on card stock, but standard printing paper will work too.
2. Color the robot! Be creative and make sure you can still see all the lines clearly.
3. Cut the six pieces out using scissors. On the body, carefully slit the 6 black lines with a hobby knife. (If you have never used a hobby knife before, ask someone to help you)
4. Fold the pieces along the dark grey lines, leaving the numbered flaps unfolded.
5. Glue or tape the flaps to the inside of the shape. (All six pieces form rectangular prisms or cubes)
6. Slide the unfolded flaps into the matching slots on the body.
7. Glue the arms onto the sides of the body in any way you choose.
